## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-9, drawn to a printer system having an RFID tag, classified in class 235, subclass 432.
  - II. Claims 10-16 and 27-35, drawn to an RFID system, classified in class 235, subclass 492.
  - III. Claims 17-26, drawn to a near field coupler system, classified in class 455, subclass 41.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claimed because other types of card such non-contact IC card, smart card, etc., could be used in the printing system. The subcombination has separate utility such as the transponder/RFID system can be utilized in other system which does not required the specific apparatus as set forth in claimed invention of Group I.
3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require

the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because other types of contactless interface such transceiver, antenna, electromagnetic field, etc. can be utilized in the printing system. The subcombination has separate utility such as the near field coupling device can be used in other system which does not require specific structure as set forth in claimed invention of Group I.

4. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because other types of contactless interface such transceiver, antenna, electromagnetic field, etc. can be utilized in the RFID system. The subcombination has separate utility such as the near field coupling device can be used in other system which does not require specific steps as set forth in claimed invention of Group II.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
